

# PRESENT AND FUTURE TECHNOLOGY TREND ANALYSIS

TAFARA ERIC MABHUTSU

12 AUGUST 2024

# OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
  - Visualization - Charts
  - Dashboard
- Discussion
  - Findings & Implications
- Conclusion
- Appendix

# EXECUTIVE SUMMARY

- Two sets of data based on technology and demographics were inherited from a modified subset of data to analyze present and future technology trends across gender, age and education level
- IBM Cognos Analytics platform was used for the performance of analysis and visualization of the trends, with results representing
  - Current Technology Usage
  - Future Technology Trend
  - Demographics
- JavaScript was the most used language, MySQL the most used database and Windows the popular platform on Current Technology Usage
- Future Technology Trend showed Python will be the more preferred language, PostgreSQL being the most sought after database to learn
- Demographics dashboard showed the majority of respondents were man consisting of 93.5% while the majority of them were holders of bachelor's degree

# INTRODUCTION

- This presentation targets an audience of people in the IT, HR industry and those interested in technology trends they might learn for future purposes
- The two datasets used consisting of demographics and technology were scrapped from a modified subset of data available on Stack Overflow
- Which programming languages, databases and platforms are mostly used are some of the questions answered in this presentation report
- This presentation shows findings of technology trends of the most sought after programming languages, databases and platforms etc..
  - Showing different kinds of visualizations from Bar Charts to Maps
  - Some relevant insights and suggestions

# METHODOLOGY

- Collect Survey Data
- Data Wrangling
- Exploratory Data Analysis
- The use of IBM Cognos Analytics
  - Dashboard Creation
  - Develop Insights

# RESULTS

# PROGRAMMING LANGUAGE TRENDS

## Current Year

Top 10 Language Worked With

## Next Year

Respondent by LanguageDesireNextYear

# PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

## Findings

- From the findings there is high risk of HTML/CSS becoming Obsolete in the future
- There is growing interest in the use of Python and TypeScript languages
- Languages like Swift, Ruby and WebAssembly are likely to be sought after in the future

## Implications

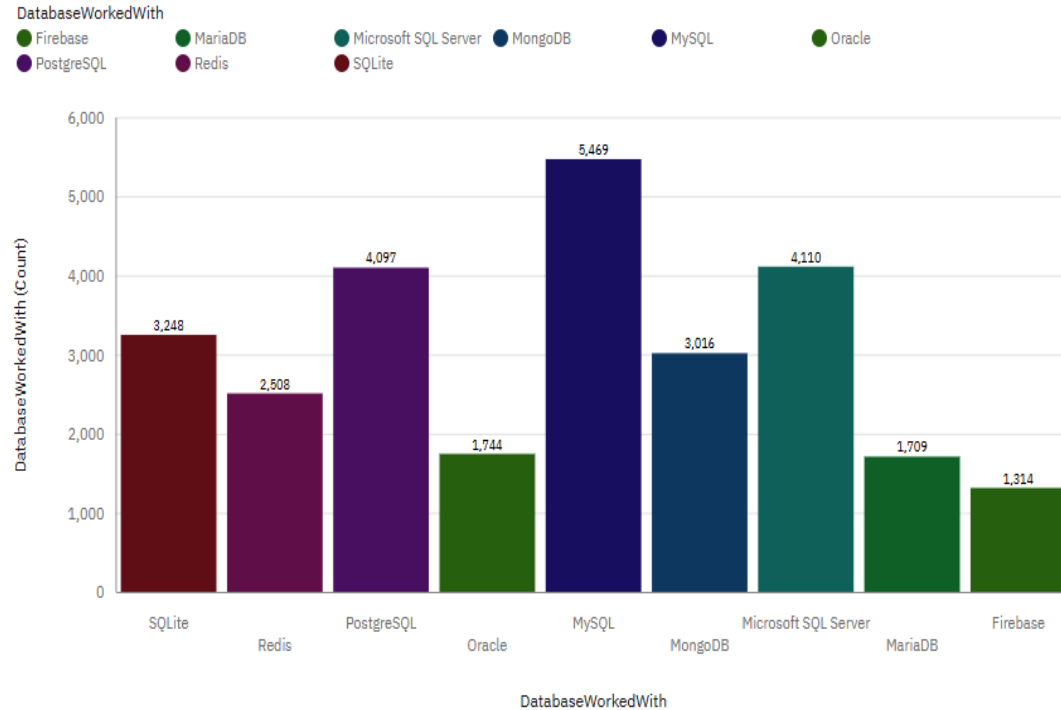

- HTML/CSS engineers are likely to develop skills in other fields like Python
- Python and Typescript skillset development may be prioritized by more people soon
- More job ads on people with knowledge of Swift, Ruby and WebAssembly are likely to increase

# DATABASE TRENDS

## Current Year

Top 10 Database Worked With

## Next Year

Database Desire Next Year

# DATABASE TRENDS - FINDINGS & IMPLICATIONS

## Findings

- Elasticsearch is likely to have drastic rise in the future
- Visualizations show MySQL is the most popular database currently and will remain a sought after database in the future though it might not be still the most popular
- Oracle may face a shift in users in the future opting for other databases

## Implications

- Many job opportunities may arise for those with knowledge of Elasticsearch
- Most likely many will continue to advance their skills in MySQL
- There is a high risk of those that know Oracle only likely to end up unemployed in the future

# DASHBOARD

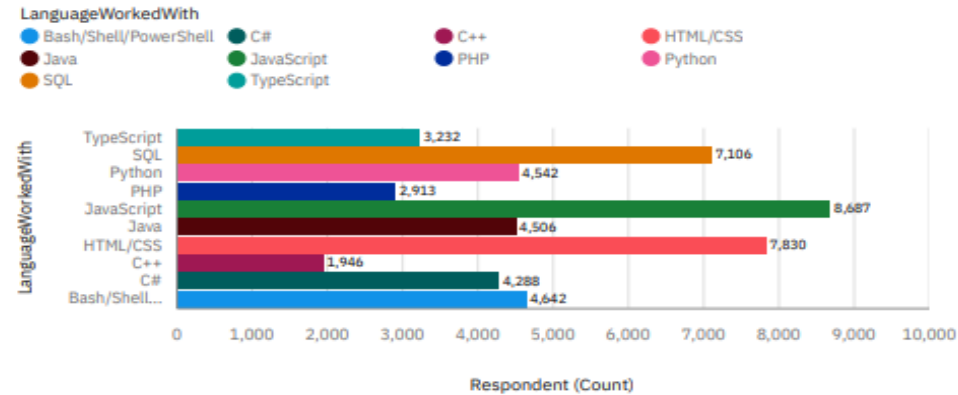

[Capstone-Project/\\_ Capstone Project Dashboard.pdf at main · 23313K/Capstone-Project \(github.com\)](#)

# CURRENT TECHNOLOGY USAGE

## Current Technology Usage

### Top 10 Language Worked With

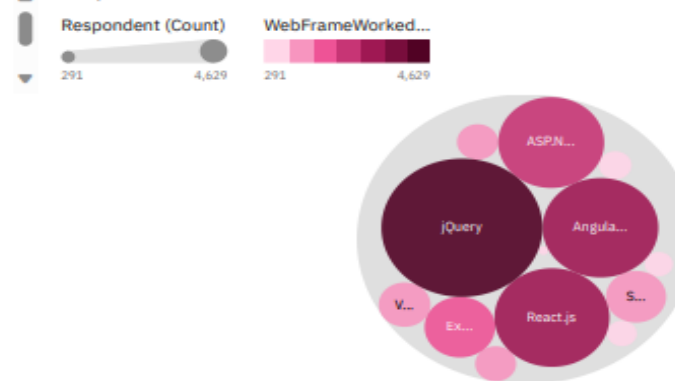

### Top 10 Database Worked With

### Platform Worked With

### WebFrameWorkedWith hierarchy colored by WebFrameWorkedWith and sized by Respondent

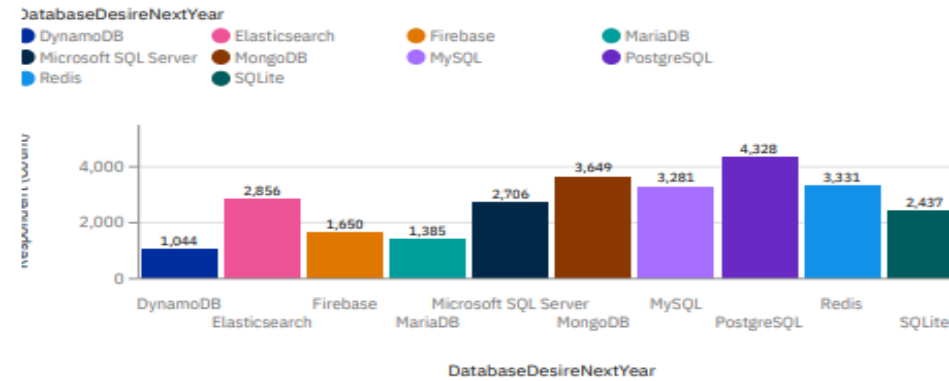

# FUTURE TECHNOLOGY TREND

## Future Technology Trend

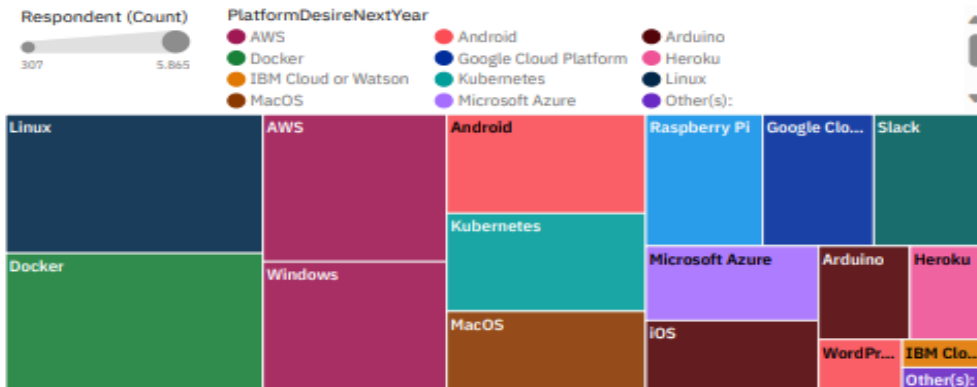

Respondent by LanguageDesireNextYear

Database Desire Next Year

Platform Desire Next Year hierarchy

WebFrame Desire Next Year

# DISCUSSION

- Will there be a shift from the most sought after languages like JavaScript, SQL and HTML/CSS?
- Can PostgreSQL and Microsoft SQL server be the most popular databases surpassing MySQL?
- Which platform will likely seize the opportunity to become the most used?

# OVERALL FINDINGS & IMPLICATIONS

## Findings

- JavaScript, HTML/CSS and SQL are the most sought after languages although future trends suggest the use of python, typescript and SQL
- HTML/CSS faces a drastic decline in the future
- Majority of the respondents age ranges between 24 to 30 years

## Implications

- It seems people are finding it easier SQL currently and in the future
- Many might take an interest in learning python in the future
- Holders of Bachelors' Degree seem to be taking an interest more than other EDLevels which might be helpful if more Webinars were hosted

# CONCLUSION

- From the visualizations of current and preferred technology SQL will remain a sought after language although not being the most popular with a shift on usage from JavaScript to Python in the future
- MySQL is currently the most popular database although there are suggestions from visualizations that PostgreSQL may become popular in future
- Future Trend visualizations suggest Linux and Docker will probably become the most used platforms with Windows losing an edge a bit
- Majority of the respondents were man constituting of 93.5% of the respondents and of those men, 5341 were holders of a Bachelor's Degree

# APPENDIX

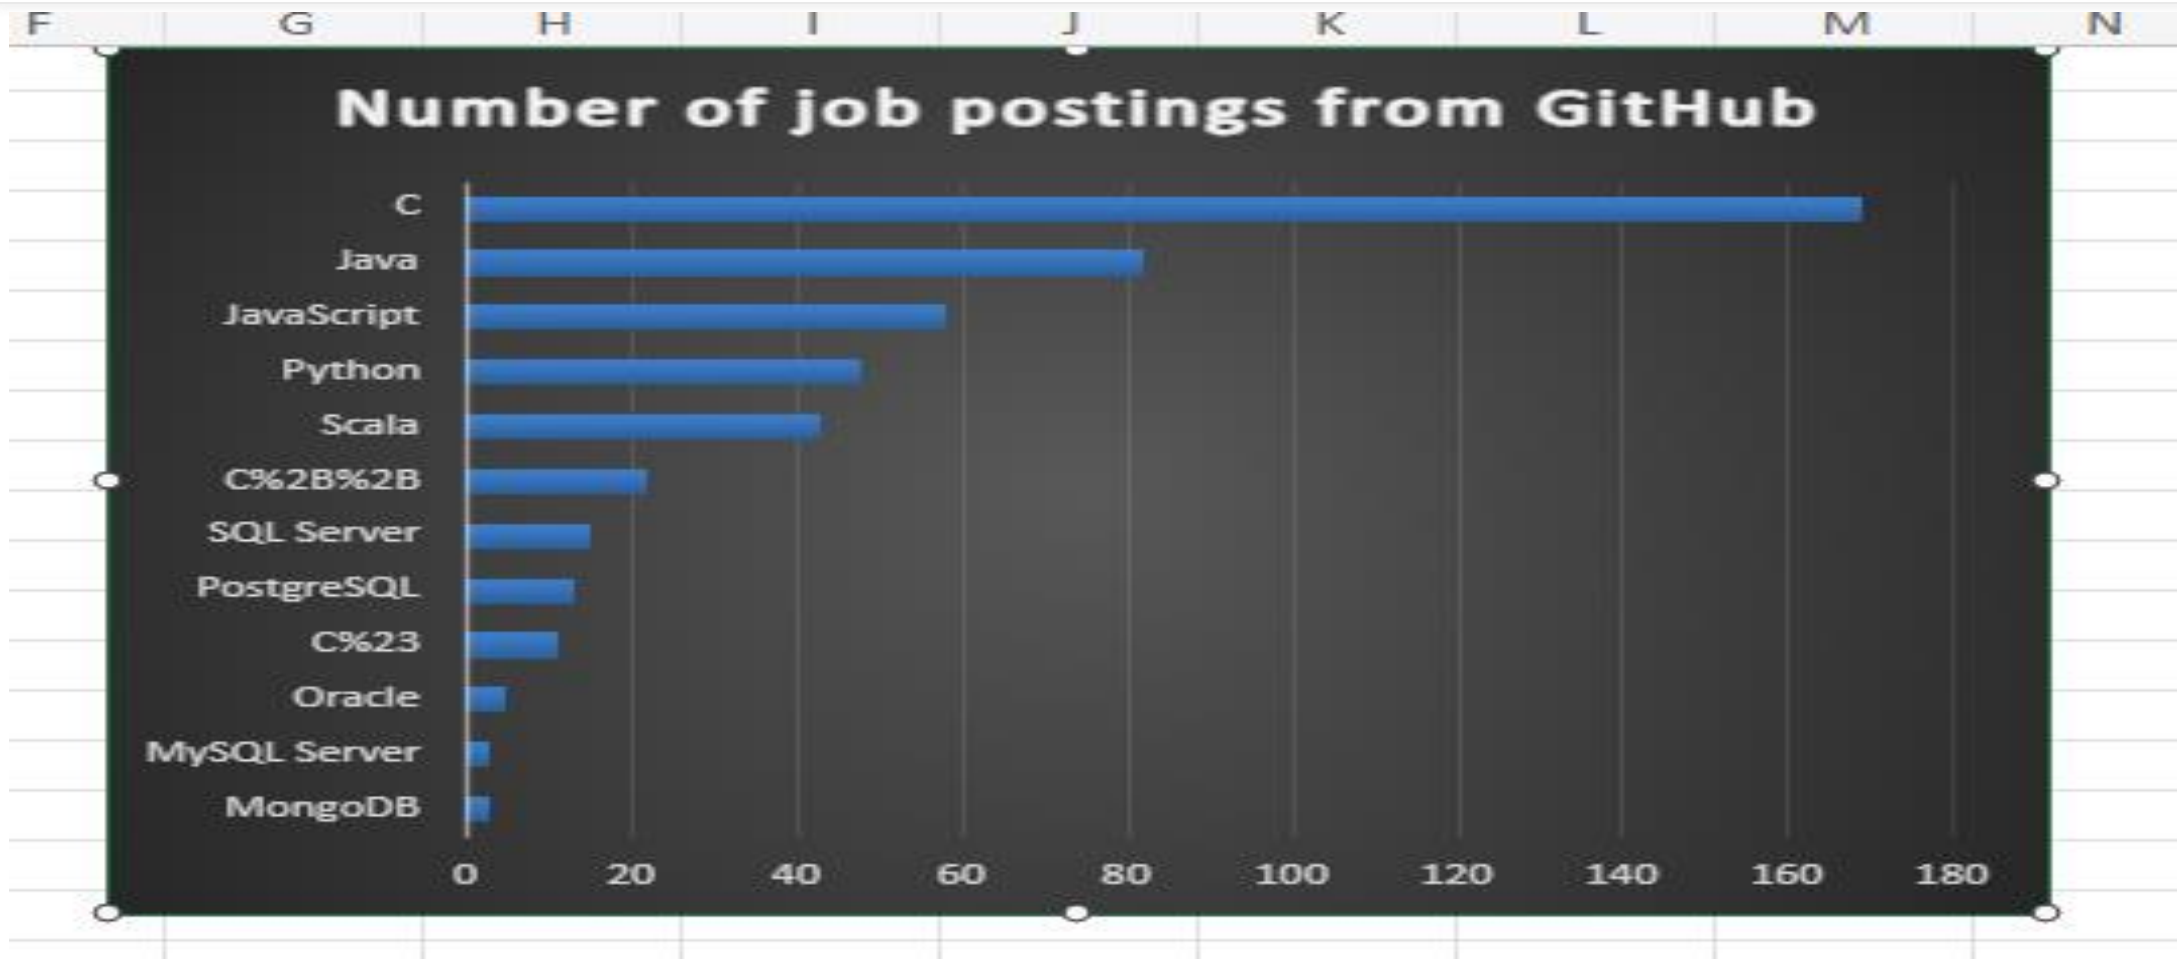

Student Status using demographic data

Student  
● No ● Yes, full-time ● Yes, part-time

# JOB POSTINGS
